

# Collactive® Collagen Complex

## NOURISHING BEAUTY

BEAUTY FROM WITHIN

### Clinically-studied anti-aging, hydration & wrinkle reduction from a marine-based collagen for supplement, beverage and functional food products

- Helps reduce deep wrinkles
- Mimics collagen & elastin ratios found in skin
- Low molecular weight
- Water-soluble
- Mild taste profile
- Sustainably-produced
- Clinically-studied
- Non-GMO
- Gluten-Free

Collactive® Collagen Complex is a 100% marine-based, all-natural ingredient composed of collagen and elastin peptides formulated in the same ratio found naturally in human skin. Collactive combines the two main constituents of the extracellular matrix and has an anti-wrinkle synergistic action: elastin fibers give the dermis suppleness that complements collagen fibers tensile strength. A study on Collactive showed a synergistic anti-wrinkle action, stimulating skin to lift and tone sagging areas and minimize lines and wrinkles, while increasing skin moisture retention. With a low molecular weight, Collactive is water-soluble and fully digestible, making it an ideal anti-aging ingredient for a wide variety of beauty-from-within formulations.

Collactive is a sustainably produced ingredient provided by CTPP-Copalis, representing a cooperative of fisheries in Boulogne-sur-Mer, France – Europe's leading port for fish processing. Collactive is fully traceable and sustainably produced.

# COLLECTIVE HM: DUAL ACTION PERFORMANCE FOR SKIN

Collective delays the skin aging process by protecting the skin and stimulating its main structural constituents.

## **COLLECTIVE HELPS REDUCE DEEP WRINKLES**

Collective collagen and elastin oligopeptides stimulate the biosynthesis of the main dermis constituents to lift and tone slacking areas. Researchers used a Skin Image Analyser® (S.I.A.) (Monaderm, Monaco) to measure the number and depth of wrinkles. Skin hydration was measured as well. Questionnaires were used throughout the clinical study and showed excellent tolerance to Collective.

After 28 days, Collective supplementation resulted in a significant decrease (19%) of the number of deep wrinkles in 71% of the subjects. The level was stabilized at day 84. In the placebo group, an increase in the number of deep wrinkles was noted at both day 28 and day 84. In addition, Collective caused a moisturizing effect on the skin.

## **COLLECTIVE REINFORCES SKIN HYDRATION**

The moisturizing effect of Collective is supported by a clinical study involving 44 women over 40 years old. The results show an increase of the entire epidermis hydration (+8%) after oral administration of Collective for three months. stabilized at day 84. In the placebo group, an increase in the number of deep wrinkles was noted at both day 28 and day 84. In addition, Collective caused a moisturizing effect on the skin.
